CLASS-LEADING SAFETY AND LONG TERM COST SAVINGS

ASR traction control helps prevent wheelspins and improves vehicle stability when driving on slippery roads.

EBD is a function that uses the ABS to distribute braking force between the front and rear wheels to compensate for changes in the load conditions or any shift of load due to acceleration/deceleration, thus preventing premature locking of the rear wheels.

*SRS airbag system and seat belt with pretensioner are activated in the event of a frontal collision, mitigating impact to the head and chest.

*Applicable for driver only.
